Excel - Assignment 2

Lookup, Logical, and Text Functions
Retrieval, validation, and text-based workbook design

Dataset	Amazon bestselling novels, 2009-2020
Core fields	Name, Author, User Rating, Reviews, Price, Year, Genre
Expected outcome	A clean, structured workbook with formulas, analysis outputs, and written conclusions

Introduction

This assignment moves from data cleaning into interactive workbook design. Students will build lookup areas, perform conditional analysis, and create reusable formula structures that respond to user input.

The emphasis is on creating a worksheet that behaves like a small analysis tool, not just a static spreadsheet.

Learning objectives

- Retrieve values using lookup formulas.
- Use conditional aggregation formulas such as COUNTIF, AVERAGEIF, and SUMIF.
- Strengthen text handling skills with LEFT, RIGHT, MID, LEN, and TRIM.
- Build a controlled input area using Data Validation.

Student instructions

1 Create a dedicated lookup sheet with labeled input cells and clearly separated outputs.

2 Use XLOOKUP where available. If unavailable, use VLOOKUP with correct absolute references.

3 Hndle missing values with IFERROR so the workbook remains polished and user-friendly

4 Keep formula references consistent so the workbook can be reused with minimal editing.

Assignment Tasks

Complete the following tasks in order. Present formulas clearly and keep your workbook organized.

1.	Use XLOOKUP or VLOOKUP to return Author for a given book name.
2.	Use COUNTIF to count books for each Genre.
3.	Use AVERAGEIF to calculate average User Rating by Genre.
4.	Use SUMIF to total Reviews for books published in a selected Year.
5.	Use IFERROR to handle missing lookup results cleanly.
6.	Create a helper column that combines Name and Author into one display field.
7.	Use LEFT, RIGHT, MID, LEN, and TRIM on text fields where useful.
8.	Build a drop-down list for Genre using Data Validation.

9.	Find books whose names contain a specific keyword using SEARCH or FIND.
10.	Prepare a mini lookup area where a user can enter a book name and see all details.

Data for Assignment Completion

- Use The Provided Data For Completing The Assignment

Submission Expectations

• A functioning lookup dashboard.

• A genre summary section driven by formulas.

• A brief note explaining the text functions used.

Assessment Rubric

Criterion	Weight
Lookup accuracy	35%
Conditional formula use	25%
Text function execution	20%
User interface clarity	20%
