Excel - Assignment 3

Sorting, Filtering, and Pivot Table Analysis
Structured summaries and fast comparative analysis

Dataset	Amazon bestselling novels, 2009-2020
Core fields	Name, Author, User Rating, Reviews, Price, Year, Genre
Expected outcome	A clean, structured workbook with formulas, analysis outputs, and written conclusions

Introduction

This assignment trains students to think like analysts. Instead of inspecting records one by one, students will use Excel's aggregation tools to identify patterns across genre, year, rating, and price.

The goal is to produce concise summary views that support decision-making, especially when the dataset becomes too large for manual review.

Learning Objectives

- Build pivot tables for multi-dimensional summary analysis.
- Use sorting and filtering to identify top-performing records.
- Interpret counts, averages, and distributions across years and genres.
- Write business-style conclusions from summary outputs.

Student instructions

1. Keep pivot tables on a dedicated sheet and label each one clearly.
2. Use meaningful field names and avoid cluttered layouts.
3. Apply filters carefully so that the analysis reflects the question being asked.
4. Support every summary with a short interpretation written in complete sentences.

Assignment Tasks

Complete the following tasks in order. Present formulas clearly and keep your workbook organized.

1.	Create a pivot table showing count of books by Genre and Year.
2.	Create a pivot table showing average Price by Genre.
3.	Create a pivot table showing average User Rating by Year.
4.	Find top 10 books by Reviews using filter and sort.
5.	Find top 10 books by User Rating.
6.	Filter books where Price is above the overall average.
7.	Identify which Year has the most books in the dataset.
8.	Create a pivot chart for book count by Year.
9.	Use slicers for Genre and Year on the pivot dashboard.
10.	Write 3 business-style conclusions from pivot analysis.

Data for Assignment Completion

- Use The Provided Data For Completing The Assignment

Submission Expectations

- Pivot tables with clear titles.
- At least one pivot chart.
- Three interpretation statements tied to the results.

Assessment Rubric

Criterion	Weight
Pivot construction	40%
Filtering and sorting	20%
Chart presentation	15%
Insight and interpretation	25%
